TECHNICAL SKILLS

Programming Languages:	C, C++, Python, SQL, JavaScript
Frontend & Mobile:	React.js, React Native, HTML, CSS, Tailwind CSS, Bootstrap
Backend Technologies:	Node.js, Express.js, Spring Boot, RESTful APIs
Databases:	MongoDB, PostgreSQL, MySQL
Machine Learning:	scikit-learn, Pandas, NumPy, Regression, Classification, Clustering
Core CS:	Data Structures & Algorithms, OS, DBMS, OOP

EDUCATION

National Institute of Technology, Calicut

Bachelor of Technology in Computer Science and Engineering CGPA: 9.62/10.0

2022 – 2026

PROFESSIONAL EXPERIENCE

Flipkart

Bengaluru, India

SDE-1

July 2026 – Present

SDE Winter Intern

Jan 2026 - Jun 2026

- Engineered cross-platform mobile features using React Native and TypeScript across Product Review, Loyalty & Plus Program, and Cart, shipped to Flipkart Minutes, an upcoming quick commerce app.
- Architected reusable Atlas design-system widgets and integrated backend APIs into scalable, server-driven UI components spanning Homepage, Product, Account, and Cart modules, cutting new-component build time by 30%.
- Optimized interactive components and animations—bottom sheets, modals, and custom tab headers—using React Native’s animation and gesture APIs, improving perceived load and interaction latency by 20%.

Salesforce

Hyderabad, India

AMTS Intern

May 2025 – July 2025

- Engineered an enterprise-grade Retrieval-Augmented Generation (RAG) system using Salesforce Einstein AI as the Large Language Model with PostgreSQL vector embeddings for scalable storage, processing 10,000+ knowledge base entries from GUS, Confluence, GitHub repositories, and public documentation
- Automated end-to-end data pipelines for document processing, chunking, and embedding, enabling efficient semantic search and improving knowledge retrieval accuracy by 40%
- Delivered the Ensure Refunds workflow and functional test suites, securing DRB and CX approval for production deployment and reducing manual refund-review time by 25%.

SOFTWARE DEVELOPMENT PROJECTS

Alumni Network Platform — Full-Stack Web Application | *Spring Boot, React.js, Tailwind CSS* April 2025

- Architected a responsive full-stack alumni networking platform serving 500+ users with features for professional connections, job opportunity sharing, and collaborative engagement using modern web technologies
- Established secure authentication, comprehensive profile management, real-time private messaging, group chat, and an automated email invitation system that onboarded 100+ new members
- Launched a job opportunity sharing module, gallery management system, and event posting features, increasing platform engagement by 40% and improving user retention

MERN Stack Blog Application — Personal Blog Platform | *MongoDB, Express, React, Node.js* April 2024

- Built a full-featured responsive blog application using the MERN stack with modern UI/UX design principles and Tailwind CSS for styling, reducing average page load time by 30%.
- Integrated JWT-based authentication and Google OAuth for secure, frictionless login, cutting sign-up drop-off by 20%.
- Shipped an interactive comment system with real-time likes and shares, lifting average session engagement by 25%.

LEADERSHIP & EXTRACURRICULAR ACTIVITIES

AlgoZenith NITC

2023 – 2025

- Published weekly contest editorials for competitive programming platforms (LeetCode, CodeChef, Codeforces), explaining algorithmic approaches and optimization techniques to 1000+ students
- Contributed daily problem solutions for LeetCode and GeeksforGeeks, focusing on data structures, algorithms, and system design concepts
- Mentored junior students in technical interview preparation, strengthening their algorithmic reasoning and coding proficiency
